Factsheets Update

- 58 English factsheets live
- 18 English audio factsheets live
- 5 translated factsheets live (Arabic, Vietnamese, Simplified Chinese)
- 43 factsheets in development

Site Update

- Launched June 2017
- 109 health condition pages
- 17 service information pages
- 796 sessions and 3,992 pageviews since December 2017

Chlamydia

Health Resource Directory.org.au
Patient Factsheet
Released May 2018

What is it?
Chlamydia is a common sexually transmitted infection caused by bacteria. You get chlamydia by having unprotected sex with someone who already has it. You can also pass chlamydia to others by having unprotected sex. Chlamydia doesn't always cause symptoms, so you may not know you have it. But, the infection can last for a long time and can lead to issues with fertility and health in general. It's important to get treated as soon as you learn you have it.

What will my GP do?
Your GP will have started your medication to treat the infection. Your GP may also discuss:

- Your treatment
- Treatment for related issues like pelvic inflammatory disease
- Testing for other sexually transmitted infections
- How to start contact tracing (telling past partners they need to get tested)
- Prevention and contraception
- Resources and support

 Your GP may refer you to a sexual health clinic if:

- Your situation is complicated
- You have several partners who need to be tested and treated
- You are more likely to need specialist care

What will my GP do in the future?
Your GP will see you again in three months for another test. This is to ensure treatment was effective and the infection is gone. If you are pregnant, re-testing is needed five weeks after your treatment has finished.

What can I do?
It's important you follow your treatment instructions carefully. Untreated chlamydia can lead to a range of fertility and health issues in both men and women. Besides getting healthy, you need to make sure everyone you've had sex with in the last six months knows to get tested, too. Speaking to your previous partners will stop them spreading the infection to others, and encourage them to get treatment.

What supports are available?
Liverpool Sexual Health Clinic
The Liverpool Sexual Health Clinic offers STI testing and diagnosis. As well as helping you with contact tracing, staff can help you manage and cope with your STI diagnosis. You can either ask your GP to refer you or contact the clinic directly.
 Address: Ground Floor 13 Elizabeth Street, Liverpool
 Phone: (02) 9627 8022
