## Factsheets Update

- 58 English factsheets live
- 18 English audio factsheets live
- 5 translated factsheets live (Arabic, Vietnamese, Simplified Chinese)
- 43 factsheets in development

## Site Update

- Launched June 2017
- 107 health condition pages
- 17 service information pages
- 677 sessions and 3,404 pageviews since December 2017

### Chlamydia

#### Patient Factsheet

Released May 2018

**What is it?**  
Chlamydia is a common sexually transmitted infection caused by bacteria. You get chlamydia by having unprotected sex with someone who already has it. You can also pass chlamydia to others by having unprotected sex.

**What will my GP do?**  
Your GP will have started you on medication to treat the infection. Your GP may also discuss:  
• Your treatment  
• Treatment for related issues like pelvic inflammatory disease  
• Testing for other sexually transmitted infections  
• How to start contact tracing (telling past partners they need to get tested)  
• Prevention and contraception  
• Resources and support  
Your GP may refer you to a sexual health clinic if:  
• Your situation is complicated  
• You have several partners who need to be tested and treated  
• You are more likely to need specialist care

**What will my GP do in the future?**  
Your GP will see you again in three months for another test. This is to ensure treatment was effective and the infection is gone. If you are pregnant, re-testing is needed five weeks after your treatment has finished.

**What can I do?**  
It's important you follow your treatment instructions carefully. Untreated chlamydia can lead to a range of fertility and health issues in both men and women. Besides getting healthy, you need to make sure everyone you've had sex with in the last six months knows to get tested, too. Speaking to your previous partners will stop them spreading the infection to others and encourage them to get treatment.

**What supports are available?**  
Liverpool Sexual Health Clinic  
The Liverpool Sexual Health Clinic offers STI testing and diagnosis. As well as helping you with contact tracing, staff can help you manage and cope with your STI diagnosis. You can either ask your GP to refer you or contact the clinic directly.  
• Address: Ground Floor 13 Elizabeth Street, Liverpool  
• Phone: 021 9227 8022

**Where can I learn more?**  
• Health Translations - multilingual resources: healthtranslations.gov.au
